

Challenges to be addressed

In Italy, Greece, Poland, Belgium and the Czech Republic, vocational training does not yet fully meet the needs of people with visual impairments.

Regulatory shortcomings, limited accessibility, inadequate teaching materials and the limited use of assistive technologies hinder inclusion and employability.

The project has been set up to address these gaps.

Project objectives and outcomes

The VISTA project promotes vocational education and training that is innovative, inclusive and geared towards the labour market.

Through accessible methodologies, digital tools and a dedicated pedagogical guide, it supports young people with visual impairments in developing skills for employability.

At the same time, it provides training organisations with effective strategies to create training programmes centred on the individual, on skills and on the needs of the world of work.

VISTA offers inclusive vocational training for people with visual impairments using tools based on artificial intelligence, accessible training courses and the skills required by the labour market.

The project offers an educational programme, a teaching guide, a dedicated app and a network of ambassadors to support students, trainers and employers.
